In-Building Coverage Testing, Commissioning, and Code Compliance

- Streamline grid-based testing to meet NFPA72 1221, NFPA 1225, IFC 510, and local code requirements
- Automate commissioning tests for FCC-compliant Business Critical and Emergency Responder Communications Enhancement Systems (ERCES)
- Verify P25, DMR, and Analog FM uplink performance automatically during grid, drive, and walk tests
- Test in-building or outdoor signal quality across multiple LMR, cellular, and WiFi networks
- Automatically generate real-time pass/fail results and printable reports

Automated Testing Saves Time & Money

PREPARE. MEASURE. REPORT. IT'S THAT EASY.

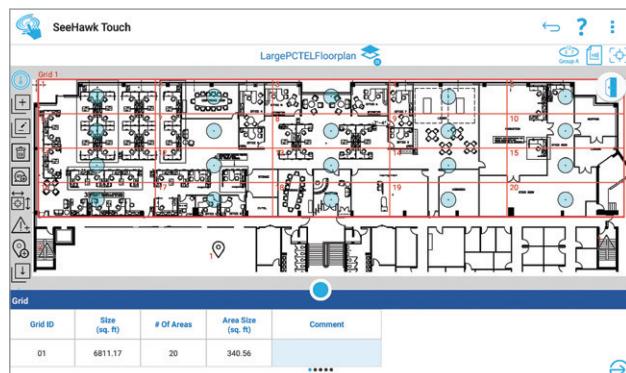

Replace manual processes and ensure critical communications coverage with the PCTEL® Public Safety Network Testing Solution. SeeHawk® *Touch* software streamlines grid-based coverage testing and BDA (bi-directional amplifier) commissioning testing. The SeeHawk® *Central* cloud platform makes planning, reporting, code compliance, and enforcement even easier, while transforming a single grid test into specialized reports on LMR and 4G/5G cellular performance, including FirstNet® and 9-1-1 Inside™ — a Safer Buildings Coalition initiative focused on the ability of mobile devices to dial 9-1-1 from anywhere inside a building.

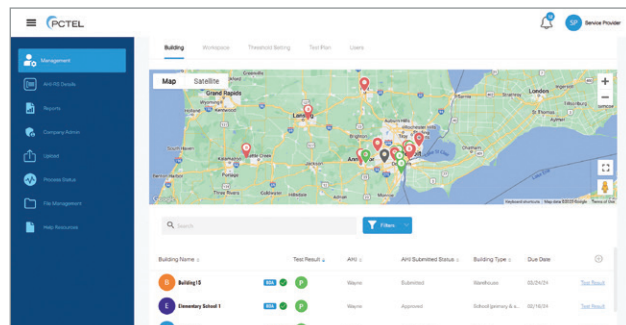

1 PREPARE

Create grids and set up tests

- Track testing due dates and schedule activities in SeeHawk *Central*
- Schedule uplink testing with SeeHawk® *Monitor* (optional)
- Prepare test plans remotely in SeeHawk *Central* cloud platform or locally on your tablet
- Import a floorplan, add and adjust grids
- Identify test locations and critical test points
- Select frequencies
- Configure pass/fail criteria
- Submit test plans for pre-approval by public safety officials in SeeHawk *Central*

- ▲ Automatically identify test locations with easy-to-use grid creation tools that rotate to fit your floorplans

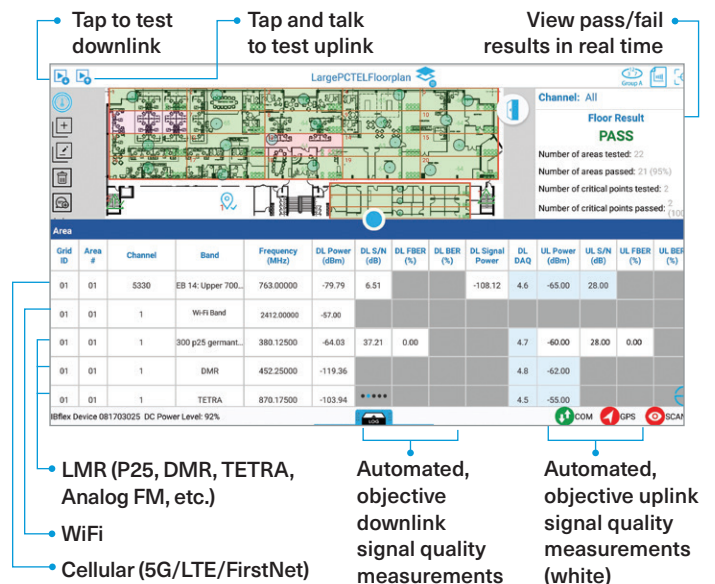

- ▲ Plan and configure tests remotely in SeeHawk *Central*

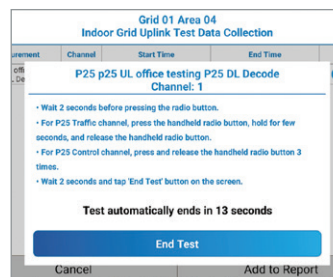

2 MEASURE

Execute tests and grade by threshold

- Measure all bands, technologies, and channels simultaneously
- Objectively measure signal quality (BER and SINR)
- Automatically detect cellular networks & identify operators
- Test channel power for any technology

Automated Uplink Testing

- ▲ Initiate uplink test at each grid location in SeeHawk *Touch*

- ▲ SeeHawk *Monitor* automatically measures uplink at the radio site

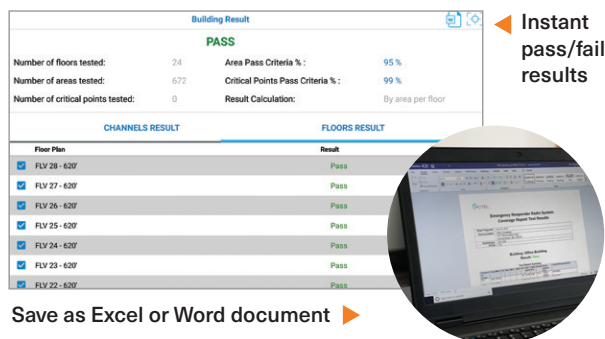

"Our testing groups are much more efficient with PCTEL testing solutions and SeeHawk® Central."

– Andrew Masur, Owner & Mobile Solutions Architect, Mobili-Fi

3 REPORT

Auto generate real-time results and submittable reports with one tap

- Synchronize uplink data from SeeHawk Monitor Platform Manager
- Automatically upload to SeeHawk Central cloud platform for collaboration and reporting
- Automatically incorporate uplink and equipment room test results
- Customize pass/fail criteria on multiple reports to meet local government or business requirements
- Supplement pass/fail results with multi-level analysis of LMR and 4G/5G performance in SeeHawk Central
- Save printable reports within minutes, locally or on SeeHawk Central
- Submit results to AHJs and Radio Systems and track approval status in SeeHawk Central

Simplify the reporting and approvals process and add multi-level analysis with the SeeHawk Central cloud platform

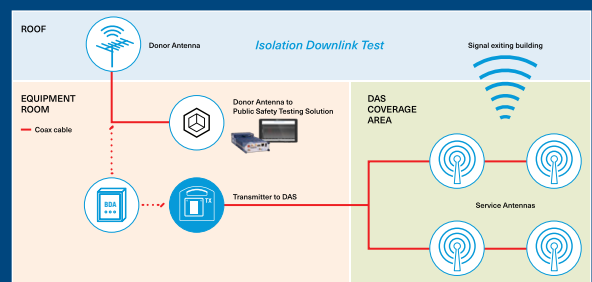

Submit Building Report

AHJ Submit

GET MORE DONE WITH ONE PUBLIC SAFETY TESTING KIT

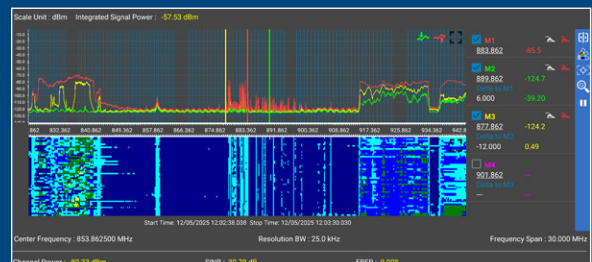

BDA Commissioning Option

- Efficiently perform all RF-based BDA commissioning tests recommended by the SBC, ETA, and BDA manufacturer guidelines
- Easily train and supervise personnel
- Guided preparation in SeeHawk Touch or Central
- Guided testing using a PCTEL kit and CW transmitter
- Automated grading & reporting in SeeHawk Touch or Central
- Submit results to public safety officials and track approval status in SeeHawk Central
 See separate brochure for more details.

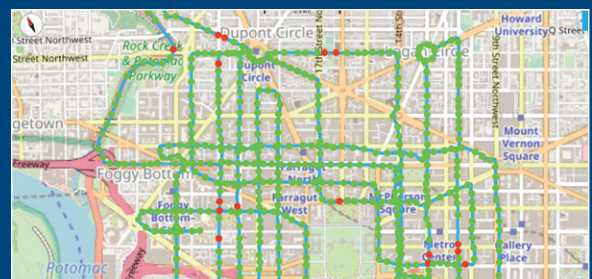

▲ BDA Commissioning: Isolation Test

Troubleshooting

- ▲ Spectrum Analysis (SA) mode for troubleshooting and equipment room work, right on your tablet. Includes Waterfall graphs to identify intermittent issues. Automated Antenna Verification Test (optional) mode also available.

Drive and Walk Testing

- ▲ Path-based testing for cellular and LMR networks. Optional outdoor mode includes automatic GPS mapping.

Critical Communications Testing: Public Safety, Business Critical, 9-1-1 Inside™

PCTEL's Public Safety Network Testing Solution combines the precision measurement capabilities of the IBf/ex® scanning receiver with our Android™ tablet-based SeeHawk Touch network testing and grid test reporting software and optional subscription to the SeeHawk Central cloud platform. Choose the kit and options that meet your testing needs.

"PCTEL's testing solution and SeeHawk Central platform have revolutionized how we conduct business. Generating reports to customers and AHJs has never been easier."

– **Randy Armstrong, Project Manager, LS Systems,**
a Division of Sciens Building Solutions

Kits	IBf/ex Scanning Receiver	SeeHawk Software	Accessories
Public Safety Network Testing Solution – In-Building P25 or TETRA (DMR and Analog FM optional)	- Lightweight software-defined radio (SDR) receiver - Measure all frequencies 10 MHz - 1 GHz - P25 or TETRA downlink signal decoding (SINR and BER) - Analog FM signal decoding (SINR) (optional) - DMR signal decoding (SINR and BER) (optional) - High-speed multi-band testing - Bluetooth® connectivity 5-Year Warranty	SeeHawk Touch features: - Grid test radio channel power (any technology) - Grid test signal quality for P25 or TETRA (DMR and Analog FM optional) - Grid test uplink (SeeHawk Monitor system required at radio site) - Grid test noise channel power - Equipment room test - Indoor walk test - Signal Analyzer	- Android™ tablet - Battery pack - Back or side pack - Walk test antennas - Flex antenna adapter - Carrying case - A/C charger
Public Safety Network Testing Solution – In-Building P25 and ATT-VZW-TMO	All P25 kit features, plus: - Decode 4G LTE - All Verizon, T-Mobile, AT&T and CBRS LTE bands	All P25 kit features, plus: Grid test LTE signal quality	All P25 kit features
Public Safety Network Testing Solution – P25 and Cellular	All P25 kit features, plus: - All cellular bands 10 MHz - 6 GHz - Decode 2G, 3G, 4G and 5G cellular technologies	All P25 kit features, plus: - Grid test 5G, LTE, TD-LTE, and UMTS/WCDMA signal quality - Outdoor mode for drive test - Antenna Verification Testing (AVT)	All P25 kit features, plus: - Vehicular rooftop antennas - Car charger
Options			
BDA Commissioning (add-on software option with hardware kit)		- Perform BDA commissioning tests - Report BDA information and test results	- RF components for commissioning tests - CW transmitter (sold separately)
SeeHawk Software Subscriptions		- SeeHawk Central subscription with unlimited test uploads and user logins - SeeHawk Touch maintenance and software updates	
Additional options	Decode Analog FM, DMR, P25, TETRA, WiFi, 5G NR, NTN, NB-IoT, LTE-LAA, or LTE MIMO technologies	Additional SeeHawk Touch software licenses for planning and reporting	- Outdoor test kit - Additional batteries
Training			

We offer in-person and online training in the use of PCTEL test & measurement solutions. Learn more at pctel.com/ps-training
